The error is coming from this line of code: [cmdletbinding()] public bool RestorePersistentState (get; set; } = true: What I've tried: Restarted machine Deleted the remaining bin folder on the desktop - No joy Comment the code out How do I resolve this error? A: Though I was not able to find it for this line of code, I was able to successfully add the code and compile the project. I was never getting this error before since I used the Pervasive PSQL V11 CTP from Visual Studio 2015 and it generated the project correctly. Hi, just saw your Email and want to tell you that my daughter wore a skirt for two years on her lap on an elevator with a very annoying lady. It must have been driving you crazy. She told her yesterday that we need to change it. Marge, The kind lady that knows you have trouble may have said that the only time you should wear a skirt is on the ground. I know the position is uncomfortable and the elevator ride is quite long, but how do you get around this while also: 1) managing to put on your own makeup 2) managing to keep you purse (not that big but heavy) 3) keeping the skirt on you and still look good ? I know the answer is "Don't wear a skirt on the floor", but that is just not possible for me. The skirt that you are talking about is very long but it does not excessively thick. I use good quality fabrics and you know that. I cut it on my own, iron it by hand and sew it by hand. In a two year period I have worn many skirts and most of them have been going on my lap. How do you like that? Probably because the elevator ride is long, I have not been wearing a skirt in the elevator ever since. The other way to look good is to wear clothes that are form fitting. This can be done by buying clothes that fit you instead of just buy the model clothes with a "measurement" not the real size. In a way this would also be working as a skirt will press down on your stomach and pressing down on your thighs. Yes, it
