The  $i$ th row of  $A$  is randomly sampled from  $N(0, \frac{1}{n})$ . Then the remainder of the  $i$ th row is uniformly chosen from  $\{-1, 1\}$ . It's known that  $A$  has no repeated eigenvalue with positive real part, and has no eigenvalue with zero real part. In particular, for each  $i$ , if  $\lambda_i$  is an eigenvalue of  $A$  and  $\text{Im}(\lambda_i) > 0$  then  $|\lambda_i| = \sqrt{|\lambda_i| \bar{\lambda}_i}$ . Let  $B$  be the matrix such that for  $i=1, \dots, n$  
$$B_{ii} = A_{ii} \quad \&\text{text}\{(if A_{ii} \text{ is not an eigenvalue of } A)\} \quad B_{ii} = 1 \quad \&\text{text}\{(if A_{ii} \text{ is an eigenvalue of } A)\} \quad \text{end\{}$$

computer and directly run its executable file. What's more important is that your Windows registry keys will not be changed in any way. The interface of CleanAfterMe is based on a standard window in which you can enable the tool to look into items revolving Windows Explorer (e.g. recent folder, UserAssist, the MUICache list, Recycle Bin, clipboard, event log, last RegEdit key). But the program can also look into web browsers (e.g. temporary Internet files, cookies, history, last 20 typed URLs, form history) and other Microsoft applications (e.g. Word temporary folder, Acrobat Reader, Outlook 2003 temporary folder). Additionally, you can enable CleanAfterMe to remember the last settings, view the cleaning report, select the deleting method (e.g. simple delete only), as well as enable the option to ask you before deleting your temporary folder. The simplistic program requires a very low amount of system resources, quickly finishes a task and didn't freeze, crash or display errors during our tests. On the other hand, there is no help file available. Also, CleanAfterMe doesn't actually perform a scanning job on the computer to show you results but directly deletes the files in the categories you select. We recommend CleanAfterMe with reservations. Freeware. • User-friendly. • Small. • Portable. • No installation needed. scanning job on the computer to show you results but directly deletes the files in the categories you select. We recommend CleanAfterMe with reservations. The negative fact about CleanAfterMe is that there is no scanning job on the computer to show you the results during the cleaning process so that it is very difficult to detect and delete a large number of useless files. Nevertheless, CleanAfterMe makes the job easier because it automatically monitors any important folders (like the Recycle Bin, the UserAssist list, the temp Internet files, temp Office 2003 files, temp Word and Excel files, your temporary internet cache files) and displays the results.
