The camera's name would be Place to Hide. The idea of the device is to have an unobtrusive camera in virtually every room in your house so that if something nefarious takes place, law enforcement can catch it on tape. The camera sits about one foot in diameter and, weighing in at 40 pounds, it will be on your living room floor with ease. Yes, even your location is hidden from the camera, but law enforcement can see all of your footage. If you're okay with that, then Place to Hide is for you. Otherwise, you may want to turn to the other 360-degree cameras on the market. The Place to Hide is a full-frame 360 camera, where the images come in from all directions, everywhere in the room. If you are watching this video and you're not sure what it's showing, click "real time" on the bottom right-hand corner to see the recorded footage from earlier that day. Home security is a tricky subject. With all the wireless cameras out there, is there really a need to have one in your house
